

2.3 Write a program to prompt the user for hours and rate per hour using input to compute gross pay. Use 35 hours and a rate of 2.75 per hour to test the program (the pay should be 96.25). You should use `input` to read a string and `float()` to convert the string to a number. Do not worry about error checking or bad user data.

[Check Code](#)[Reset Code](#)

```
1 # This first line is provided for you
2
3 hrs = input("Enter Hours:")
4 rate = input("Enter Rate per Hour")
5 pay = float(hrs)*float(rate)
6 print("Pay:",pay)
7
```

Your Output**Desired Output**

Pay: 96.25
