

6.5 Write code using `find()` and string slicing (see section 6.10) to extract the number at the end of the line below. Convert the extracted value to a floating point number and print it out.

Check Code**Reset Code**

```
1 text = "X-DSPAM-Confidence: 0.8475";  
2 num = text.find("0")  
3 a = float(text[num:])  
4 print(a)  
5
```

Your Output**Desired Output**

0.8475
